

Analyser Polytron analyser

Name	Polytron analyser
Order number	5.10.404
Description	Combined oxygen/explosion measuring device inside rugged plastic mobile container. Included are four reels with connection cables and sensors

Analyser

The analyser measures the O₂ and LEL quality in two locations

In total five cards are mounted in this rack

- O₂-1 Sensor inside
- O₂-2 Sensor inside
- LEL-1 Sensor inside
- LEL-2 Sensor inside
- MASTER Controls card 1-4

There are two alarm levels adjusted for every measured channel:

- Alarm level 1
When alarm 1 is triggered an acoustic signal will sound to indicate the alarm. On the analyser the corresponding indicator will light up red. The acoustic signal can be muted by pressing the reset button on the analyser.
- Alarm level 2
When alarm 2 is triggered an acoustic signal will sound to indicate the alarm. On the analyser the corresponding indicator will light up red. The acoustic signal and alarm can be resetted by pressing the reset button on the analyser.
